Evaluation of Miravis® Neo in Corn Production

PROJECT GOALS:
Miravis® Neo is a new fungicide developed by Syngenta. It contains a three-way mixture of azoxystrobin, propiconazole and Adepidyn®—a new fungicide mode of action. Early development work has shown that Miravis® Neo controls key diseases, increases yield, plant health and harvestability. The purpose of this research is to characterize the value of Miravis® Neo fungicide under Iowa farming conditions.

WHAT WE NEED FROM YOU:
• Choose a field that has a history of disease pressure. Corn on corn rotations are encouraged.
• Apply Miravis® Neo according to the plot layout.
• Treatments
  1. No Fungicide.
  2. Miravis® Neo at 13.7 oz/A at the V5 growth stage followed by 13.7 oz/A at the VT growth stage.
  3. Miravis® Neo at 13.7 oz/A at the VT growth stage.
  4. Optional: Apply Miravis® Neo at 13.7 oz/A at the V5 growth stage only.
• Provide yield/management information after harvest.

WHAT ISA WILL DO FOR YOU:
We will provide:
• Enough Miravis® Neo product for the trial field.
• Imagery of the trial field.
• Scouting results on Miravis® Neo efficacy on corn diseases.
• A summary of trial results from your farm.
• An aggregated data summary for all similar trials combined.
