

# ILeVO<sup>®</sup> Seed Treatment on Soybean Cyst Nematode

## PROJECT GOALS:

1. Test activity and yield benefit of ILeVO seed treatment at two rates
2. Characterize whether ILeVO seed treatment reduces soybean cyst nematode (SCN) populations

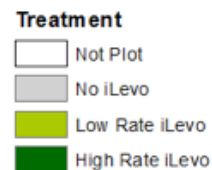

## WHAT WE NEED FROM YOU:

- Plant provided seed according to the example plot layout
- Choose a field with high SCN pressure
- Provide as-planted data for the field
- Harvest plot strips with the row
- Manage the crop and provide yield information soon after harvest.

## WHAT ISA WILL DO FOR YOU:

We will provide:

- Seed for plot
- SCN sampling
- Aerial image of farm
- Summary report on results from your farm and cross location analysis of all farms in the study
