

# Value of NemaStrike™ Seed Treatment in Soybeans

NemaStrike™ is a new soybean seed treatment with activity on soybean cyst nematode. In this research, we characterize the efficacy and yield benefits of this exciting new seed treatment.

## WHAT WE NEED FROM YOU:

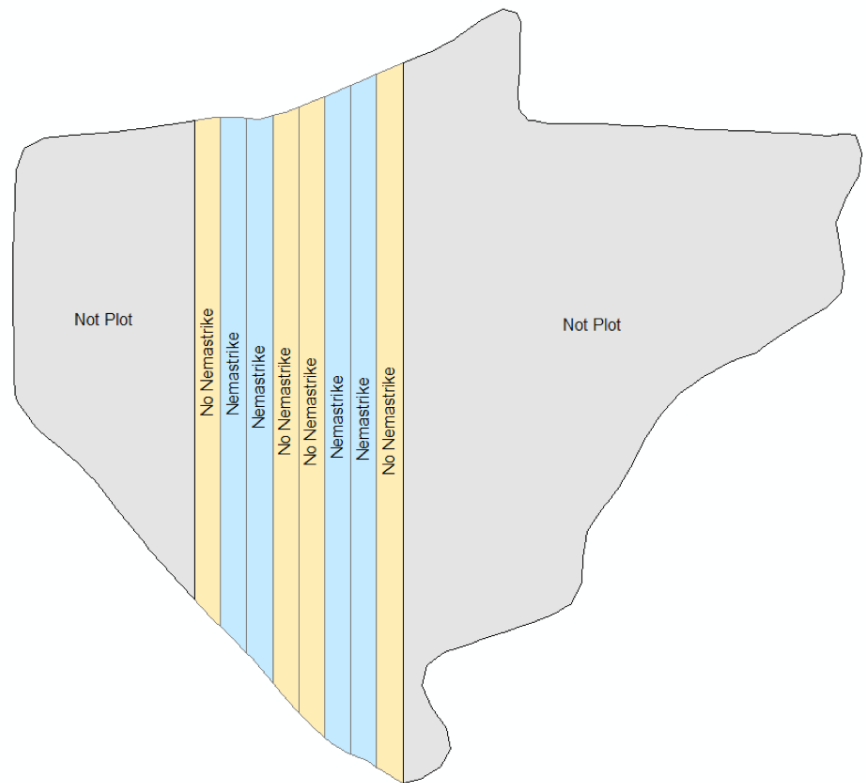

- Plant the treated and non-treated seed according to the suggested plot layout. Note that the 'No NemaStrike' comparison will be treated with fungicide and insecticide.
- Harvest the plot with the rows to help us analyze the results.
- Provide as applied and yield monitor data.

## WHAT ISA WILL DO FOR YOU:

We will provide:

- Seed for treated and untreated comparison.
- Soybean Cyst Nematode sampling.
- Aerial image of the field.
- A summary of trial results from your farm.
- An aggregated data summary for all similar trials combined.
- Protect the confidentiality of your data.

## Suggested Plot Layout:
